

Basic & Universal Logic Gates

Types of Logic Gates

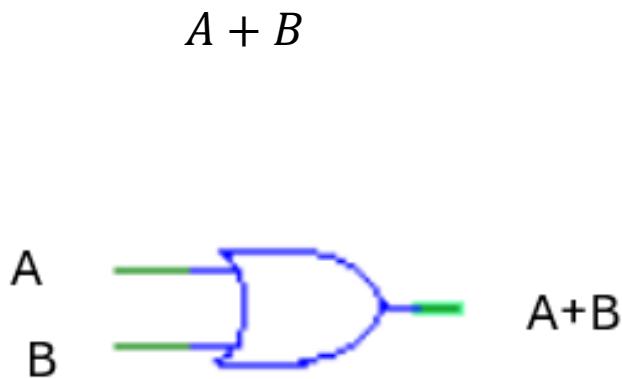

NAND Gate representation

- All the logic gates can be implemented using NAND gates only
- Let's consider the basic logic gates
- Implementing **NOT** gate using **NAND** gate ONLY

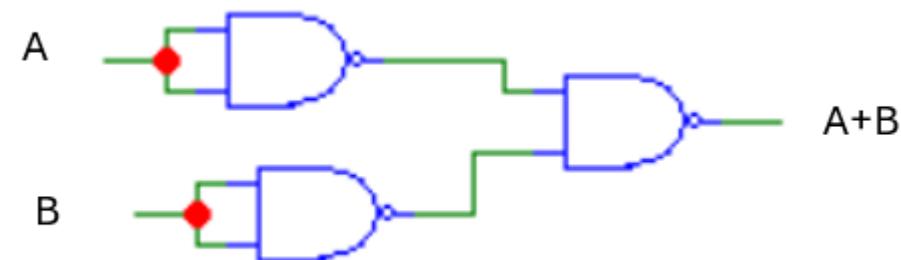

- **OR Gate by using only NAND gates**

By applying de morgan's rule to the equation of OR gate

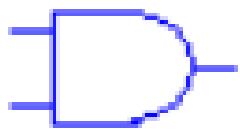

$$\begin{aligned} A + B &= \overline{\overline{A} + \overline{B}} \\ &= \overline{\overline{A} \cdot \overline{B}} \end{aligned}$$

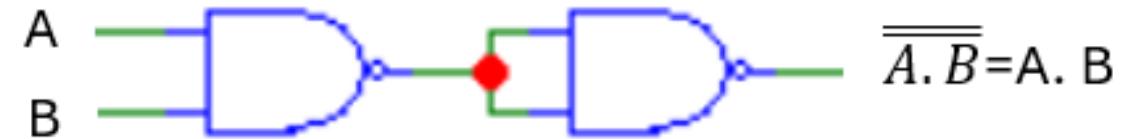

- AND Gate by using only NAND gates

By applying de morgan's rule to the equation of OR gate

$$A \cdot B$$

$$A \cdot B = \overline{\overline{A} \cdot \overline{B}}$$

- Implement the XOR gate using NAND gate only

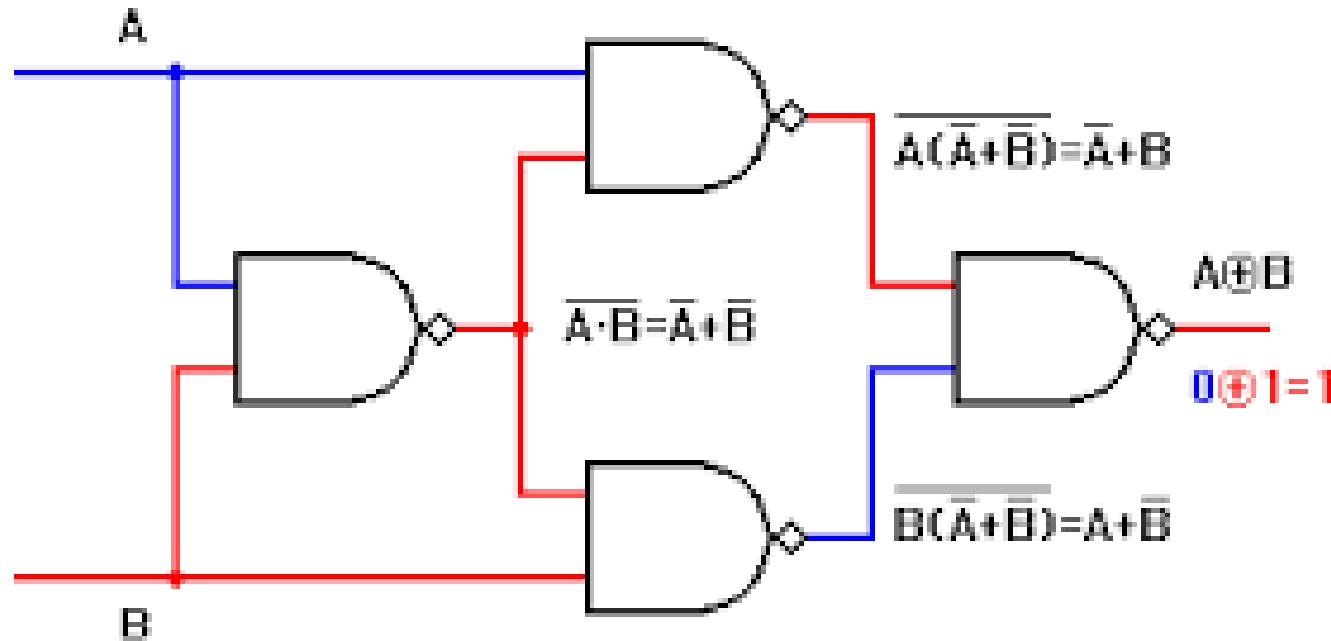

$$A'B + AB'$$

$$\overline{\overline{AB}} + A\overline{\overline{B}}$$

$$\overline{\overline{(AB)}} \cdot \overline{\overline{(A\bar{B})}}$$

- Draw the NAND gate logic diagram

- Another method of implementing XOR gate using NAND gate only

Homework

Implement NOT, AND, OR operations using:

- NOR gates only

- Implement the circuit for the following expression using AND, OR, NOT gate

$$Z = \bar{A}B + X\bar{Y}$$

- Implement the expression using NAND gate only

- Implement the circuit for the following expression using Only NAND gates

$$1. \overline{\overline{A + \overline{B} \quad \overline{C}}}$$

$$2. \overline{\overline{A + \overline{BC}}} + AB + \overline{CD}$$

Sensor system of S0, S1, S2 and S3 are used to detect movement around a security compartment. These sensors are connected to an alarm system that would indicate outcomes depending on the following conditions.

- Only sensor S1 and S3 are triggered
 - Only sensor S0 and S2 are triggered
 - S0, S1, S3 are all triggered
 - None of the sensors are triggered
-
- i. Determine the truth table of the above system (4 Marks)
 - ii. Get the simplified:
 - a. SOP expressions (4 Marks)
 - b. POS expressions (4 Marks)
 - i. Implement the circuit using:
 - a. NAND gates (4 Marks)
